

IDS TILDA

Working together for health and well-being.

The Intellectual Disability Supplement to **The Irish Longitudinal Study on Ageing.**

Main aim:

To identify the principal influences on successful ageing in persons with intellectual disability, and determine if they are the same or different from the influences for the general population.

Sample profile – who we talked to:

753 people with intellectual disabilities from all around the country

Aged 40 years and over – average age 54.7 years

All levels of intellectual disability

All types of living circumstances

Representing the population of older people with an intellectual disability in Ireland

CONCEPTUAL FRAMEWORK
